Lehigh County Chiefs of Police Association Consortium Test

5 N Main St
Coopersburg, PA 18036

Informed Consent Form

The undersigned hereby gives informed consent to engage in a series of procedures relative to taking a battery of exercise tests and participating in a variety of physical activities. The purpose of the testing is to determine physical fitness, cardiovascular function, and health status. All exercise testing and physical activity sessions will be supervised and monitored by trained exercise technicians. These activities include walking, running, weight training, and callisthenic exercises performed in either a field or gymnasium setting.

I am aware of the possibility that certain detrimental physiological changes may occur during exercise and exercise testing. These changes could include heart related illness, abnormal heart beats, abnormal blood pressure, and in rare instances, a heart attack. If abnormal changes were to occur, the staff has been trained to recognize symptoms and take appropriate action, including administering CPR and First Aid.

I have read this form and understand that there are inherent risks associated with any physical activity and recognize that it is my responsibility to provide accurate and complete health / medical information. Furthermore, it is my responsibility to monitor my individual performance during any activity and to alert the supervising exercise technician of any pain, discomfort or adverse effects I may experience.

I hereby waive and release PCPA, its testers, trainers, helpers, and other participants and persons who will be assisting in this testing, whether employees of PCPA or independent contractors or consultants, and the owner of the location where the testing is held, its officers and employees or agents from any and all liability of any nature for injury, damage, or any other loss resulting from the testing and expressly assume the risk of such damage, injury, or loss while engaged in any testing.

I give informed consent for testing data to be recorded to determine my state of physical readiness as it applies to the essential job functions of a Pennsylvania Police Officer.

Medical Release Form

Dear Physician:

In order for (print applicant's name) _____, an applicant for the position of police officer, to participate in the physical performance test, it is necessary for him / her to obtain clearance from a licensed physician. Please review the test guidelines attached to this form and sign the appropriate line below. Additional space is allowed for comments, including any limitations on the applicant's participation.

All testing is monitored by certified fitness coordinators. A test event is ended when the applicant meets the requirement, i.e. if the standard is 25 push-ups, the test event ends when the applicant meets the standard. The test's events and battery are of a Pass / Fail type.

I have examined the applicant, whose name is listed above.
The applicant **MAY** participate in the Physical Performance Test.

Physician's Signature: _____

OR

I have examined the applicant, whose name is listed above.
The applicant **MAY NOT** participate in the Physical Performance Test.

Physician's Signature: _____

Comments: _____

Any questions regarding this form or the Physical Performance Test shall be directed to:

Gregory Bean, Testing & Consulting Coordinator,
Pennsylvania Chiefs' of Police Association,
3905 North Front Street, Harrisburg, Pennsylvania 17110
gbean@pachiefs.org, or (717) 236-1059, ext 107.

Physical Performance Test Battery

- The Physical Performance Test Battery consists of five exercise test events, immediately preceded by a warm-up session with intermittent rest periods to ensure the safety of the applicants.
- The Physical Performance Test Battery is designed to measure the cumulative effect on each applicant. Therefore, a failure on any one of the test events constitutes a failure of the entire Test Battery and will exclude the applicant from further processing.
- The Physical Performance Test Battery and Standards are detailed below along with a general explanation of each test event protocol:

Vertical Jump	15.5 Inches
Sit-ups	30 Repetitions in One Minute
300 Meter Run	66 Seconds
Push-ups	25 Repetitions
1.5 Mile Run	15 Minutes 54 Seconds

1. **Vertical Jump:** This is a measure of lower body explosive strength. This is an important part of any physical exertion scenario. Example: Vaulting or jumping during a pursuit.

The applicant stands directly under the horizontally aligned, half inch graduated blades of the Vertex Vertical Jump Tester. With their feet together, they begin by reaching up with one hand as high as possible keeping their heels flat on the ground. This establishes the applicant's base line reach height mark. From this mark, a measurement is made to fix the height of the standard mark. The vertical jump may be performed in one of two ways. The applicant may take a position with both feet squarely beneath them, bending down, and jumping straight up. The other method allows the applicant to keep one foot stationary, with the opposite foot step back or to the side, then stepping back to a square position, and jumping straight up. With either method, the applicant must reach

up with one hand and touch the machines graduated blade set to the standard mark. The applicant has three valid attempts to reach the standard mark.

Physical Performance Test Battery (continued)

2. **Sit-ups:** This is a test of the muscular endurance of the trunk including the abdominal muscles and hip flexors. This is an important factor in a use of force scenario and minimizing lower back problems. Example: Gaining control of a suspect.

The applicant starts by lying on their back, knees bent at approximately 90°, feet flat on the ground, and their hands behind the head with their fingers interlaced. Their feet will be firmly held in place. For a repetition to be counted, the applicant must touch their knees with their elbows and then return to the lying position so that the shoulder blades touch the ground. During the exercise, the applicant may not raise their hips or “kip” and they may only rest in the “up” position. The required number of repetitions must be completed within one minute.

3. **300 Meter Run:** This is a measure of anaerobic power. This is an important factor in exerting short bursts of energy. Example: A foot pursuit.

The applicant must complete a 300 meter course in the required time. On a standard 440 yard track, this is approximately $\frac{3}{4}$ of the way around the track.

4. **Push-ups:** This is a measure of dynamic upper body strength. This is an important part of any dynamic physical exertion scenario. Example: Gaining physical control of a suspect or clearing a roadway.

The applicant starts in a kneeling position in order to set their hands, palms down on the ground, approximately shoulder width apart. The legs are then extended straight back with the feet together or up to six inches apart. The applicant flexes their arms at the elbow until the upper part of the arm (Humerus) becomes parallel to the ground. This is approximately three inches off of the ground. The applicant then returns to the up position with a straight or “soft lock” of the elbows. The applicant must remain in the straight plank position from their head to their heels. The applicant may only rest in the up position only. There is no time limit on this test event. No other part of the applicant’s body may touch the ground during the test event or they fail.

5. **1.5 Mile Run:** This is a measure of aerobic power or VO₂ max. This is the foundation for almost all physical tasks. Example: Use of force incident or administering one man CPR.

Gibson & Associates, Law Enforcement Fitness Professionals

The applicant must complete the 1.5 mile course in or under the required time. On a standard 440 yard track, six laps must be completed. The applicant may not leave the running surface prior to successfully completing the course.
